# Data Centre Services

## Backing up your backup power supply

Your data centre is only as reliable as its backup power source and the fuel that feeds it.

If your business cannot afford unplanned downtime, our data centre fuel services are essential to ensure that your backup power is available the moment that you need it.

### What data centre services do we offer?

Our fuel experts provide a range of planned preventative measures to help data centres maintain 100% uptime, all the time. These include:

- Fuel oil testing & polishing
- Fuel system inspections
- HVO fuel transition services
- End-to-end fuel management
- Tank integrity testing & NDT
- Emergency fuel contracts

### Why choose Crown Oil Environmental?

- We're a leading provider of data centre fuel services across the UK
- Our industry-leading chemists operate our purpose-built in-house laboratory, ensuring that your fuels are accurately analysed and tested
- Our turnkey data centre fuel solutions are completed by in-house teams of expert engineers, streamlining the delivery of your tailored services without the need to engage multiple parties
- Our qualified specialist engineers can provide advice on storing and handling oils safely
- As a carbon neutral business, we understand the challenges of decarbonising your operations, and can help you to reach your net zero goals
